

the 1990s, the number of people in the world who are under 15 years of age has increased by 1.2 billion, from 1.1 billion in 1980 to 2.3 billion in 1999. The number of people aged 15 and over has increased by 1.1 billion, from 1.1 billion in 1980 to 2.2 billion in 1999.

There are a number of reasons why the world population is growing so fast. One of the main reasons is that the number of children born to each woman has increased. In 1980, the average woman in the world had 2.5 children. In 1999, the average woman in the world had 2.7 children. This is a small increase, but it is enough to make a big difference over time.

Another reason why the world population is growing so fast is that the number of people who are living longer is increasing. In 1980, the average person in the world lived for 65 years. In 1999, the average person in the world lived for 72 years. This is a big increase, and it means that there are more people living for a long time.

There are also a number of other reasons why the world population is growing so fast. For example, the number of people who are moving from rural areas to cities is increasing. This is because there are more jobs in cities, and cities are more attractive than rural areas. This is also because cities are more developed than rural areas, and they have more services and amenities.

There are also a number of other reasons why the world population is growing so fast. For example, the number of people who are moving from developing countries to developed countries is increasing. This is because there are more jobs in developed countries, and developed countries are more attractive than developing countries. This is also because developed countries are more developed than developing countries, and they have more services and amenities.

There are also a number of other reasons why the world population is growing so fast. For example, the number of people who are moving from low-income countries to high-income countries is increasing. This is because there are more jobs in high-income countries, and high-income countries are more attractive than low-income countries. This is also because high-income countries are more developed than low-income countries, and they have more services and amenities.

There are also a number of other reasons why the world population is growing so fast. For example, the number of people who are moving from poor countries to rich countries is increasing. This is because there are more jobs in rich countries, and rich countries are more attractive than poor countries. This is also because rich countries are more developed than poor countries, and they have more services and amenities.

There are also a number of other reasons why the world population is growing so fast.

For example, the number of people who are moving from the developing world to the developed world is increasing. This is because there are more jobs in the developed world, and the developed world is more attractive than the developing world.

This is also because the developed world is more developed than the developing world, and it has more services and amenities. There are also a number of other reasons why the world population is growing so fast. For example, the number of people who are moving from the poor world to the rich world is increasing. This is because there are more jobs in the rich world, and the rich world is more attractive than the poor world.

This is also because the rich world is more developed than the poor world, and it has more services and amenities. There are also a number of other reasons why the world population is growing so fast. For example, the number of people who are moving from the low-income world to the high-income world is increasing. This is because there are more jobs in the high-income world, and the high-income world is more attractive than the low-income world.

This is also because the high-income world is more developed than the low-income world, and it has more services and amenities. There are also a number of other reasons why the world population is growing so fast. For example, the number of people who are moving from the poor world to the rich world is increasing.
