

the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.1 billion to 1.5 billion.

As the world's population grows, the demand for food and other resources will increase. This will put pressure on the environment and on the world's food supply.

One way to meet this demand is to increase the amount of land that is used for agriculture. This can be done by clearing more land for farming or by using more land for grazing.

Another way to meet this demand is to increase the efficiency of agriculture. This can be done by using more fertilizers and pesticides, or by using more advanced farming techniques.

There are many other ways to meet this demand, and it is important to find the best way to do so. This will require a combination of increased land use, increased efficiency, and other measures.

It is important to remember that the world's population is growing, and the demand for food and other resources is increasing. We must find ways to meet this demand in a sustainable way.

One way to do this is to use more land for agriculture. This can be done by clearing more land for farming or by using more land for grazing.
