

the 1990s, the number of people in the world who are under 15 years of age is expected to increase by 1.5 billion.

As the world's population grows, the demand for food and other resources will increase. This will put pressure on the environment and on the world's food supply. It is important that we find ways to meet this demand without harming the environment or the world's food supply.

One way to meet this demand is to increase the efficiency of our food production. This can be done by using better farming techniques, such as crop rotation and the use of fertilizers. It can also be done by using better irrigation systems and by using better storage and distribution methods.

Another way to meet this demand is to reduce the amount of food that is wasted. This can be done by using food more efficiently, such as by using leftovers and by reducing the amount of food that is thrown away. It can also be done by using better storage and distribution methods.

Finally, we can meet this demand by increasing the amount of food that is produced in the world. This can be done by using better farming techniques, such as crop rotation and the use of fertilizers. It can also be done by using better irrigation systems and by using better storage and distribution methods.

There are many ways to meet the world's growing demand for food and other resources. It is important that we find ways to do this without harming the environment or the world's food supply. This will require the cooperation of all people in the world.
